Hustle castle arena brackets calculator

Get Legendary Items from Hustle Castle Arena. Players in the level 100 tournament bracket have more chances of getting a place in the tournament leaders. Fill your castle with high star living: New children born in the living room borrow statistics and rarity from their parents. This means that if you bring two 1-star residents into the living room, you will have a 1-star baby. Since these are useless, you need to bring your best residents into the living room and keep them occupied until you have the best possible crew in your castle. This will require time, but here's how to do it:1. First mate residents without caring too much about stars until you fill your castle. Ideally, have 2 star and up people in the living room.2.After filling up your castle, it's time to be picky. Bring two of your tallest star males into the living room (preferably 5 star). Rotate ladies there like a woman can get pregnant once a day.3. Banish the low star dwellers of your castle and keep trying until you have only 5 star ones. This will take time, but now that you have a system in place, it will take much less than randomly to go about it. If you want to banish residents from your castle, you can do so. Just tap a resident, then the hamburger menu near their name and select the option. Upgrade: When upgrading, it's important to upgrade the supplies first, especially food and gold. Food is the most important thing you will need throughout the game, so the more you can store the more you will be able to collect when you are not playing. Placing the stay in a room that upgrades will reduce the upgrade time. When you upgrade your Throne Room a lot of things will be more expensive, so make sure you check the charts before you upgrade your Throne Room.PVP rating:It may be helpful to reduce your rating for a few reasons. You will lower your chances of being attacked while you are away and you will be matched with people with lower scores next round. If you have a lower rating you have a higher chance of getting stronger and thus defeating more and gaining resources. Especially when you have food left before you fall asleep, just fight and lose purpose. (you could remove residents from your barracks until you have one left). That way the next day you might be able to defeat everyone because of your lower rating. If you get attacked while you were away you have the revenge option and it won't cost food. So it's the best way to reduce your rating, but maybe not always available. Equipment: Make sure you equip all residents with the highest possible gear. Break all the gear you don't need anymore, be careful with gear for everything else except your fighters. Always keep six of each item you need for chefs for example, when you upgrade you can have more residents in each room. When you are able to craft utensils use shards to manufacture better gear. Hustle Castle Tournament BracketsSave the purple shards for when your fighters are level 70+. Invasions & Quests:Make sure Finish these every day, you need to collect as much gear as possible. Daily missions provide diamonds (you can watch a video for diamonds) and chests. Diamonds: Get Troll's assistant is a no brainer. He is 450 diamonds in 15 days and he will collect resources and complete training while you are away. You will get the diamonds from playing daily so no need to invest any money. Buying Premium when there is a discount may be worth it if you feel like supporting the game. Friends: You can make friends in this game via Facebook. You can send and receive resources and when you send to 10 friends you get a chest of resources. These coffins could be saved for farming dark souls. Arena brackets list: (in bold are brackets with a lack of players and a long waiting time in the queue)4x30, 4x40, 4x47, 4x55, 4x705x40, 5x47, 5x55, 5x62, 5x70, 5x77, 5x85, 5x92, 5x100 6x40, 6x47, 6x55, 6x62, 6x70, 6x87, 6x85, 6x92, 6x100Your console calculation:The left part of your mount (named A) is the number of fighters allowed by your barracks. The right part of your console (named B) is the average level of your best fighters (between all your inhabitants, throughout your castle). Note that the average level is always rounded down (for example, 47.9 = 47). As soon as your average level is above a bracket level, you go to the next bracket. For example, with an average level of 48, you go to the 55 bracket level. Your console is AxB.Tip: To win tournaments, try to choose a console where you have a good stuff When you play a tournament on a mount, you can't go down to a previous console In your team you can have some fighting over your bracket theoretical level, your console only depends on your best average levelDark Souls:It's a good idea to save food chests for farming dark souls. There are a few levels that give you the most for the food you need to be spent. For lower levels you could farm levels 9 and 10 and when you are strong enough you should farm level 30.Buying a soul stealer for x2 or x3 might be a good idea if you know you could get something you really want. If you save food chests, it might be worth it to get Legendary gear. If you are just starting out, farm as much as you can and buy a chest or some high level gear. Once the dark souls have taken, you can't get anything more and you'll lose your multiplier. You have to buy it next time, so keep in mind they are just a one-time use. Buying purple shards at a low level can also be a good idea, as they will be needed later and everything will be more expensive every time you upgrade your Throne Room.The gear you get at a low level will be destroyed soon anyway, so saving purple shards will get you great legendary gear when you are at a much higher level. Don't use the purple shards until you're a resident at level 70+, otherwise you will end up destroying gear when you get to the higher level. NEVER BUY RESIDENTS OF DARK SOUL SHOP. Gem bay:From the moment you can do Bay do it twice free for free Day. Even if you don't have enough residents who are strong enough, just try to farm as much as you can from it for later. The chart is still under construction. If you have info to add comment here.. Daily Quest Chest – In this age of writing, one of Hustle Castle's updates is an improved chest from Daily Quests. You can get a free once you have collected enough mission rolls to unlock a free chest. Each time you open a chest, the next breast reward will be upgraded to a higher level. However, higher tiered chests require more quest rolls. Unlocking the highest level of the equalized chest will reset the level of the next breast to the lowest level level level level. The highest level leveled chest can give you a piece of legendary items. Arena Shop – One of many reasons many players join the arena is that the arena shop sells legendary items, artifacts and mystic chest. You can buy items from the Arena store using Valor Brands. Legendary items appear in the store when your Fighter Training Room Level reaches level 6 or once all your fighters join level 40 tournament mount. Even if prices are too high, it's still a great place to get some legendary items. The mysterious chest is the most expensive among the three I mentioned because it gives you a chance to get several legendary items. Don't worry though, mysterious chests guarantee you at least two legendary items. Only the odds of getting around 2 to 4 legendary items from the chest vary. Because of this, players tend to think it's not a good bargain given the amount of Valor brands you need to pay for a single mysterious breast. This is why gamers prefer to buy the exact legendary item or artifact instead of chests from the store. However, the arena store's stock updates every after 14 days so you have to wait before you can buy another legendary item or you can spend some diamonds. Hustle Castle SupportTournament Leaders – If you are part of the top 100 tournament point leaders, you will be rewarded with a Royal Tournament Chest. Usually, players in the level 100 tournament bracket have more chances to get a seat in the tournament leaders. This is mainly because the maximum amount of tournament points you can get for each is at maximum if you are in the highest level tournament bracket. That's why it's a little impossible for players in the lower-level tournament brackets. But I've actually seen some players in the level 40 tournament bracket reach the tournament leaders. I'm pretty sure, you have to exert an exceptional amount of effort to reach a place in the top 100 if you're in a lower level tournament bracket. Hustle Castle has 3 workshop rooms namely The Weapons Workshop, Armory Workshop and Jewelry Workshop to manufacture weapons, armor and jewelry respectively. Crafting legendary items requires 10 epic shards and mana and takes a time to finish quitting Epic shards can be harvested by breaking epic items or buying it from the Dark Portal Store.The amount of Mana is required and the amount of days taken to craft a legendary item depends on the level of your workshop room. However, you can minimize the amount taken to craft an item in the workshop by putting an Alchemist Dweller. Charisma132, Still figure it out but it does the job The avchd file I had from my PC was just a file, but within that file there are several files. I just tried dragging the whole avchd file and converting, but it kept crashing. I did a search for avchd on my computer and found individual files - not sure yet how it worked, and was then able to convert small batches at a time. So in short, all the ins and outs of how it works still doesn't make sense to me, and yet I'm still able to convert the files and get it to do what I want. Which is 5 stars for a free app. I might update this if I figure more out. TomTwigg, Great solution This app makes using the video files from my Sony a7 feasible, integrating them easily into post production workflow with my Canon camera. I'm slowly changing my feelings about AVCHD format as I get a chance to work with files from both camera systems—the quality holds up very well while producing significantly smaller file sizes. Not only does this mean I don't have to change sd cards very often, but the files also play more smoothly in the editor without having to make the clip. Patch Gran, Wanted to like it I used it to convert some. MTS files from an AVCHD collection from a Lumix camera. Unfortunately for some of them created super jerky video that plays on QuickTime. Playing it in VLC worked fine though. The app also liked to crash and turn on itself almost every time I ran it. So it sorta works and I'm glad it's free, but it didn't work for me. I'd rather use iMovie to import the movies because at least they don't cause jerky QuickTime playback problem is that you lose time and date though. If you do lots of photo or video editing or develop apps but still need a smaller laptop, get it. It includes a quad-core processor and much faster integrated graphics, both of which will make your work go significantly faster—2018's 13-inch Pro is almost as fast as the 15-inch models from previous years. High End Formal Dining Room SetsHigh Quality Mac Screensholt also has twice as many Thunderbolt 3 ports, two on each side, and a slightly lighter screen can show more colors. The drawbacks are that the Pro costs \$300 to \$600 more than Air with similar memory and storage options, it's a little heavier, its battery life is a little worse, and you still have to put up with low-travel keyboards and USB-C and Thunderbolt dongles. It's our best Mac pick in. You won't notice a huge speed boost for everyday computing tasks, but its six-core Intel Core processor can give it an over 13-inch Pro when rendering video or compiling code, and its discrete AMD Radeon GPUs provide better performance when running 3D drafting programs or games. It's also the only MacBook that can have up to 32GB of memory, and the only MacBook that can run two 5K external screens instead of just one. Its 15-inch Retina display is the largest and highest resolution you can get in a Mac laptop, and as the 13-inch model has the four Thunderbolt 3 ports. But it costs at least twice as much as the MacBook Air, and its battery life is relatively relatively so it's worth considering just if you know you will use everything as extra power. Because you won't be able to upgrade Apple's current laptops later —memory, storage, and processors are all built-in—you'll need to make sure you buy the right configuration. We've listed our recommended configuration for each of our choices in the sections below. If you are not insted to macOS, we have. The best reason to buy a MacBook is if you need or prefer macOS instead of Windows. The operating system is stable and easy to use, but more importantly, it integrates well with iPhones and iPads-iMessages and SMS messages sent from your Mac also appear on your iPhone and vice versa, and features like AirPods and makes it easy to share notes, photos, videos, reminders, contacts, passwords, bookmarks and other data between your devices. Macs are also a good choice if you want great support. Apple's technical support is to all other PC and phone makers, and Apple Stores and provide available personalized technical support and repairs in many locations. Macs aren't a good choice if you have less than \$1,200 to spend on a laptop, if you want to get the most performance for your money, or if you want to run high-end games. Give as good or better performance, more types of ports, and sharp IPS LCD screens to or below the price Apple charges for MacBook Air.Are a better choice if you have only \$500 to spend. And, while bigger and bulky than any MacBook, typically have newer and faster dedicated GPUs than Apple's laptops do (and you can buy for less than half of what a 15-inch MacBook Pro costs). From budget-friendly alternatives to thin-and-lightweight ultrabooks to powerful gaming laptops, we've spent hundreds of hours finding the best laptops for most people. It's best to buy Apple laptops soon after they're introduced so you get the most for your money, but you shouldn't wait for an update if you need a computer right now—Apple's laptop update cycles are much less consistent than those for iPhones and iPads, so it's hard to predict when or how often new models will be released. Once a Mac has been available for a few months, however, you can save a significant amount by purchasing from. Apple-refurbished products look and work the same as new ones and have exactly the same warranties, including optional ones, so they're a great way to save a few hundred dollars. July 30, 2018 - This high-end 15-inch laptop includes an Intel Core i9 CPU and others. Apple MacBook Pro with Touch Bar (15-inch, 2018) review: The High End Systems - we renew and create lighting products and control systems that highlight some of the world's greatest artists on the biggest stages, as well as film and TELEVISION studios, cruise ships, corporate events, amusement parks, churches, restaurants and retail premises. The third party can warn you when specific models are in stock, if are looking to buy a specific configuration. How we chose. Top-down: the 2018 MacBook Air, the 13-inch MacBook Pro and and 2017 MacBook Air. Photo: Andrew Cunningham As of this writing, Apple offers half a dozen laptops in the MacBook, MacBook Air and MacBook Pro lines. We considered the following criteria when deciding which ones to recommend:. Performance: Intel Core dual-core processors are great for basic browsing and light photo editing—the things most people use their computers for-- but a four- or six-core MacBook Pro is worth paying extra for if you do cpu-intensive video editing or code compilation. All MacBooks include at least 8GB of RAM, which is plenty for everyday tasks, but if you buy 13- or 15-inch Pro, you should consider upgrading to 16GB or 32GB (respectively), especially if you're editing a lot of large files. Display: A high-resolution IPS display is a must on any laptop at or above \$1000. All Apple Retina displays are crisp and color-colored, and can display nearly 100 percent of the sRGB color gamut. MacBook Pro models include screens that support the larger ones, which just means they can display more shades of certain colors than sRGB screens—this is nice to have but not necessary for most people. Ports: Most Apple laptops now use either USB-C or Thunderbolt 3 ports exclusively, for everything from data to video to charging. We recommend models with at least two of these ports, so you can charge your laptop and connect a second device at the same time. We have picks for both and, as well as for, and spare parts or replacement, and that will help you connect all your old stuff to these new parts. Keyboard, Touch Bar, and Touch ID: All of Apple's current laptops (aside from the old \$1,000 MacBook Air) use any version of the same low-travel butterfly-switch keyboard that Apple has been refining since its introduction in 2015—it's just something you have to live with. We prioritized the latest third-generation revision, which is a little quieter and is (and theoretically more reliable) than older versions. We also preferred Mac with Touch ID to Mac without it; the presence or absence of touch bar does not factor in one way or another, because it is a neat feature but still mostly superfluous. Size and weight: All Apple laptops are relatively thin and lightweight compared to similar laptops from other manufacturers, but the 13-inch models tend to offer the best combination of size, weight and performance. Price: Macs cost a lot, but most people don't have to buy the most expensive ones. Our recommended configurations balance performance, storage, and price—we especially recommend relying on cloud storage or instead of buying a larger SSD if you can, because Apple's expensive storage upgrades can as much as double the price of their laptops. Battery Life: When performing basic computer tasks such as browsing or sending email, all Apple laptops should be able to get you through most of an eight-hour working day on a single charge. But Apple notes that the 13-inch Air should last longer than any of the Pros—for 12 hours of browsing browsing of 10—and who are in the making up with our experience. The best all-around Mac: Apple MacBook Air (2018). The best Mac laptop for most people is the one. It's fast enough for the things that most people use a computer for-browsing, working on documents and photo editing lights—and it has an excellent high-resolution screen, a large trackpad, enough battery life to keep most people through an eight-hour workday, and a (relatively) reasonable price. The Air's biggest flaws are almost all shared by other modern Apple laptops: the low-travel keyboard, a small number of homogeneous ports (in this case, two Thunderbolt 3 ports) that may require the use of or, and a high price relative to with similar performance and features. But Air's light weight, solid construction, and still makes it a great laptop, especially if you also own one or other Apple devices. We recommend the entry-level model with 8GB of memory and a 128GB SSD for most people; you can upgrade storage if you know you need more space, but Apple's high upgrade prices make cloud storage or a more economical option. Air uses an eighth-generation Dual-Core Intel Core i5 processor, with no options for upgrading to a faster model. For everyday tasks that don't require the processor to run at full speed over sustained periods of time, it's about 20 percent faster than the previous Air and comparable to. But for intensive tasks like encoding video, 2018 Air is about half as fast as the quad-core MacBook Pro, and that was in our tests. The integrated GRAPHICS PROCESSOR in 2018 Air is also about half the speed of it in the 13-inch MacBook Pro-the Air is fast enough to power an external 4K or 5K display, but you shouldn't expect it to run high-end games. The 2018 Air display is a 2560×1600 IPS display, and it's crisp and colorful—it's as large and resolution as the 13-inch Pro screen, so it can fit the same amount of information. Unlike the Pro, it doesn't support the wider, so it can't display as many shades of certain colors, and it doesn't support, which changes the tint of the display to match your ambient lighting. But neither feature is something that most people need or even notice. Our choice has only two Thunderbolt 3/USB-C ports for connection and charging, both on the left side of the laptop, so to connect your other devices. Each port supports charging, 40-gigabits-per-second data transfers, external displays (up to 5120×2880 resolution, or 5K), and USB peripherals—but Air has no other ports apart from a headphone jack. It's better than the 12-inch MacBook, which only has a single USB-C port, but if you want more than two ports, you'll need to buy a MacBook Pro instead. 2018 Air uses Apple's low-travel butterfly-switch keyboard, which, but it has some improvements that we like. The third generation keyboard marginally quieter than older models and better protects the keys from dirt and dust, which theoretically makes it more reliable. The Air's keyboard also includes a fast, accurate Touch ID fingerprint sensor without the mostly redundant Touch Bar-Touch ID, you can use your fingerprint to log in, authorize system-level data such as software installations, pay for online purchases using Apple Pay, and even authenticate your identity in. Compared to previous non-Touch Bar keyboards, Apple has made the line of dedicated function keys slightly higher in 2018 Air to match the height of the fingerprint sensor. All of our choices include the same Force Touch trackpad, which is still the best trackpad we've used on a laptop because of its large size and accuracy. It doesn't have a hinge, so it recognizes presses anywhere on the surface, but it has haptic feedback that makes it feel and sound like it's clicking even if it's not moving. In our Google Chrome-based browser battery test, the 2018 MacBook Air didn't last as long as most Windows PCs we tested, but it lasted longer than the 2018 13-inch MacBook Pro and almost as long as the old 2017 MacBook Air.Using Safari instead of Chrome can help battery life. The 2018 MacBook Air has the exact same footprint-11.97 inches wide and 8.36 inches deep-as the 13-inch MacBook Pro, but its tapered design makes it just a little thinner. It's also 0.25 pounds lighter, at 2.75 pounds. It puts it in the between 3-pound 13-inch MacBook Pro and 2-pound 12-inch MacBook, but wearing it feels very similar to wearing the Pro. Flaws but not dealbreakers. As mentioned above, current MacBook models use USB-C or Thunderbolt 3 for all connectivity, including power. This means that if you have any hard drives, scanners, printers, USB sticks or card readers that use USB Type-A ports, you will need; similarly, if you want to use an external display or projector, you need the right. It also means you don't get Apple's large MagSafe magnetic power connection, now available only on the old non-Retina MacBook Air.The only other port is a 3.5mm headphone/mic jack. While you can get used to typing on the keyboard, you can get used to being far from Apple's excellent previous keyboard. Apple's mediocre, low profile laptop keyboard is another great sticking point. The keys are still full size, but they have very shallow travel (the distance you need to press down a key to establish a keystroke), and they bottom out (stop moving because you have pressed them as far as possible) after a very short distance. While you can get used to typing on the keyboard, you can get used to being far from Apple's excellent previous keyboard. We would gladly give up a few millimeterlaptop thinness for better keys. A faster laptop: 13-inch MacBook Pro with Touch Bar (2018). If you do lots of photo or video editing or app development, it includes a quad-core processor and much faster integrated graphics, both of which will make your work go significantly faster—2018's 13-inch Pro is almost as fast as the 15-inch models from previous years. It is also twice as many Thunderbolt 3 ports, two on each side, and a slightly lighter screen that can display more colors. The drawbacks are that the base-model Pro costs \$600 more than the cheapest Air, it's a little heavier, its battery life is a little worse, and you still have to put up with low-travel keyboards and USB-C and Thunderbolt dongles. Our recommended configuration is the \$2,000 model with an eighth-generation Core quad-core Core i5 processor, a 256GB SSD and 16GB of memory. You can save \$200 by buying it with 8GB of memory instead, but if you do the kind of work that can take advantage of a quad-core processor, you're also doing the kind of work that can benefit from more memory. Using the 13-inch MacBook Pro feels almost identical to using 2018 Air, so we're focusing on the differences. Pros' screen has the same resolution as Airs, but it uses it wider instead of sRGB, so it can display more shades of certain colors; it also supports True Tone, which subtly changes the screen color temperature to match the ambient lighting in the room. Both give great looking results, but the features are not necessary or noticeable to most people. In addition to a headphone jack, the Pro has four Thunderbolt 3 ports, two on each side. These are handy if you want to plug in a lot of things without using a hub or dock, but even if you don't, it's handy to be able to plug the laptop's charging cable in from either side. Just make sure you need the extra performance-\$2,000 is a lot to spend on a laptop, no matter how fast it is. The Pro's third-generation butterfly-switch keyboard also includes Apple's Touch Bar along with Touch ID, instead of a dedicated feature line. Touch Bar is a high-resolution touchscreen that dynamically changes to display controls specifically for the current app (if the app has been updated for it). It's intermittently useful, depending on how you work and what you use it for, but many Wirecutter staff prefer a row of function keys instead; unfortunately, as of this writing there is no way to get 13-inch Pros performance without also getting the Touch Bar, because Apple hasn't updated for over a year, and it has only one dual-core processor, like Air, rather than the 2018 model's quad-core CPU. The 13-inch MacBook Pro weighs 3 pounds, just 0.25 pounds more than the 2018 Air, and has the same 11.97-by-8.36-inch footprint; it's just slightly thicker, because it's the same thickness whole instead of tapered as Air. It's convenient enough to carry with you, and it's one of the fastest laptops you can buy without getting anything bigger. Just make sure you need the extra performance-\$2,000 is a lot to spend on a laptop, no matter how fast it is. The largest, fastest MacBook: 15-inch MacBook Pro (2018). It's our best Mac pick in. You won't notice a huge speed boost for everyday computing tasks, but its six-core Intel Core processors give it an over 13-inch Pro when rendering video video compile of code, and its discrete AMD Radeon GPUs provide better performance when running 3D drafting programs or games. It is also the only MacBook that can use up to 32GB of memory, and the only one that can use two 5K external screens instead of just one. Its 15-inch Retina display is the largest and highest resolution you can get in a Mac laptop, and as the 13-inch model it has four Full-speed Thunderbolt 3 ports. But it costs at least twice as much as the MacBook Air, it's a pound heavier than the 13-inch Pro, and its battery life is relatively mediocre, so it's worth considering just if you know you're going to use all that extra power. We recommend the \$2,500 configuration of the 15-inch Pro, which includes a core i7 processor with six cores, 256GB of storage, 16GB of memory, and the AMD Radeon Pro 560X graphics processor (the fastest available with this writing). Although 16GB of memory is plentiful, even for most professionals, you can add 32GB of memory for an extra \$400. You can also add as much as 4 TB of internal storage, but Apple's storage prices are so high—the 4TB SSD carries an amazing \$3,400 upcharge—that cloud storage or is a more economical option. MacBook Pro shallow keyboard takes some getting used to, and its Touch Bar is sometimes a nuisance, but it has the best trackpad we've used on a laptop. Photo: Kyle Fitzgerald The 15-inch MacBook Pro screen includes The DCI-P3 color gamut support and True Tone feature, just like the 13-inch Pro does, but its higher, 2880×1800 resolution makes it possible to fit more things on the screen at once. It's also physically bigger, of course. But other than performance, the larger screen, and larger size and weight, the 15-inch MacBook Pro is much like. High End Formal Dining Room Setst still has four Thunderbolt 3 ports, two on each side, and a headphone jack. It also has the exact same low-travel butterfly-switch keyboard, Touch Bar, and Touch ID sensor, and aside from being even bigger, using its Force Touch trackpad feels exactly the same as on Air and 13-inch Pro.High Mac Quality ScreenshotNo 15-inch laptop lasted as long in our Google Chrome battery test as most of the 13-inch laptops we tested , but the 15-inch MacBook Pro trades a lot of battery life for its extra speed. Although the 15-inch MacBook Pro is significantly larger and heavier than any of Apple's 13-inch laptops—it's 13.75 inches wide and 9.48 inches deep, and it weighs 4 pounds—it's small and light next door. It's also more expensive than the laptops, though: for example, offers comparable processors and as-good-or-better GPU, 16GB of memory and 512GB of storage for less than \$2,000, and that's typical for larger, more powerful laptops aimed at creative professionals. It's not great if you need or prefer to use macOS, but it puts Apple's pricing in perspective. What to look forward to. It is Apple's smallest and lightest weighs just 2 pounds, 0.75 pounds less than 2018 Air and a full pound pound than 13-inch Pro. But the MacBook achieves its small size in part by using a low-power processor without a fan; The MacBook is similar to the performance of 2018 Air in everyday tasks, but its lack of a fan means the processor can't run as fast as long as you play, edit photos or videos or do any other task that maxes out the processor for extended periods of time. Since it only has a single USB-C port, if you want or connect more than one peripheral at the same time, you need one, or one. And it hasn't been updated in over a year, which means it's using the second-generation version of Apple's low-travel butterfly keyboard. Think about the MacBook only if size and weight are more important to you than anything else; most people should get Air.The is \$100 more expensive and just a little faster than the 2018 MacBook Air, and its screen supports the DCI-P3 color scheme. But since Apple hasn't updated this model in over a year, it's using a last-generation dual-core processor rather than a current quad-core version, and it has the second-generation low-travel butterfly-switch keyboard. There is also missing a Touch ID sensor. People looking for a cheap but good Apple laptop are better served by the 2018 MacBook Air, and people who need something faster than the air should step up to the more up-to-date Touch Bar MacBook Pro. Apple still sells for \$1000. It still has some features we like, including USB-A ports, an SSD card reader and it. It's also Apple's last laptop with the old keyboard design, which isn't as solid as the butterfly breaker keyboard in newer Airs and Pros but has better, more satisfying key travel. But in every other way, the old Air feels like a huge step down from the new-it's sub-1080p 1440×900 TN screen looks faded and blurry next to the screens of the newer Air and modern Windows laptops, its 2010-era design is a little heavier and noticeably larger, and its fifth-generation dual-core Intel processor and integrated GPU are slower than those of any other Apple sells. The old Air might be worth considering if you can find it for a significant discount-\$700 or less-and you want the old keyboard and old ports more than you want a good screen. But you spend so much time looking at your laptop's screen that it's hard to recommend buying a 2017 Air at full price these days. Disclosure: Senior editor Dan Frakes, who contributed to an earlier version of this guide, accepted an editorial position at Apple in October 2018. Several Wirecutter editors reviewed and edited the content of this article to ensure impartiality. Page 4 Knock On Effect MeaningKnock On Effect Origin In this case, the proofreader does not change the text directly. They're commenting on the page evidence. You may be required to work on both hard copy page and PDF page evidence – it will depend on the client's wishes. You will look for final spelling, punctuation, grammatical, and consistency errors that remain in the text. However, However, also expected to check the appearance of the text. Checks will cover: the headers match the chapter title.the chapter title matches the entry in the content list. the design of the different text elements is consistent (e.g. What's important here is that any change you suggest can have an impact elsewhere. That doesn't mean you shouldn't make the change; it means rather that you need to pay attention to the consequences of your actions - the domino effects. What are domino effects? Professional proofreaders often refer to the indirect consequences of their mark-ups as domino effects. A useful way to think about this is in terms of dominoes because it gives us a perfect description of what is at stake. Imagine that you have lined up four dominoes: A, B, C and D. You press over A and it shoots over B.B then strikes over C, which in turn causes D to fall. Domino D's overthrow was caused indirectly by Domino A, although A did not touch D. The changes we make can, if we're not careful, affect the flow of text, the pagination, the content list, and the index. An example Here is an example to illustrate the point. Imagine the publisher's short tasks proofreader with caring for orphans and widows (the stranded single rows at the bottom or at the top of a page). Solutions that involve instructing a setter to shuffle a line back to a previous page, or forward to the next page, to avoid the widow/orphan can cause one, or all, of the following problems: . Repositioning a line to another page automatically forces a flow of text. It looks good for the next six pages, but on the seventh page after the change was made, a new orphan or widow line has now appeared. The previous arrangement of the text prevented this. The latest Tweets from Knock On Effect (@KnockOnEffect1): Play our first gig since February, this Thursday at Cafe Continental in Gourock. Would be great to see you all there! Let's imagine that the seventh page is still widowed/orphan-free. However, the reflow of text means that this seventh page now contains a line that appeared on the previous page. This line includes a keyword charter that cross-referenced 130 pages later. Now the cross-reference is incorrect. The index is created simultaneously by a professional indexer. It is not uncommon for proofreaders never to see the index, nor to check it. The line that has been repositioned on another page contains an author's quote that is included in the the indexer does not know what the proofreader has done and the proofreader does not know which terms are included in the index. None of them know that the index entry now has the wrong page number attached to it. In all three cases, the proofreader has prevented one problem but caused others. Consequently, good practice means more than blindly putting mark-up instruction on a particular page. One has to think about how the problem can be dealt with and the effect handled so that there is no domino effect. Seeing an orphan or widow line is not enough. We may also have to consider the following: Provide additional instructions to the setter on how to deal with the problem by compensating elsewhere on the page (e.g. increasing or reducing row spaces and depth, new line creation, etc.) so that the effect of moving a line is limited to the page where the change has been made and its reverse recto/verso. To tell the project manager about the proposed move line so that the manager can inform the indexer. Holding out for obvious keywords or quotes in lines that have been moved to check if they are cross-references in the text (with a PDF, even when working on hard copy, is a must in these circumstances). Summary Idea If you are looking to train as a proofreader and would like to be suitable for marking up page evidence, check that your course contains a domino effect component. Even when we get detailed briefs on an ideal layout, the publisher's client expects us to be aware of the consequences of our amendments. The task of the proofreader is to find solutions to problems in a way that does not cause collateral damage. (An earlier version of this article first appeared on an American editor.). The domino effect is a secondary effect of any event. Since loan failure creates a problem in the housing market, this problem can affect other segments of the overall national economy. Domino effect is the figurative meaning of what you have described literally. The best example was the argument that the administrative branch of the U.S. government gave to pour troops into South Vietnam; that if South Viet Nam fell to the Communists, there would be a domino effect in other East Asian nations. It would have been a domino effect if it had happened. The domino effect is a secondary effect of any event. The argument that there should be one communist take over after another was just a theory. South Vietnam was united as a communist nation. The domino effect didn't happen. If it had been, it would have been the knock-out effect. Let me use an example of the American invasion of Iraq.There is no domino theory there. But as a result of the invasion a domino effect has happened. Iraq is engaged in a civil war with elements of anarchy. You would have expected that when the American troops entered Baghdad and captured Saddam that the warfare would have been over. Instead, the consequence of the invasion was the Civil War. Let me know if you still need more explanation. We have some very wise English speakers on this forum tonight. No Idea My post was just another example of domino effect and domino effect. In Vietnam, the President of the Us administration expected that the result of a communist-unified Vietnam would be to trigger the domino theory. Instead, and unexpectedly by the administration, Laos and Cambodia have remained independent. So there was no domino theory, but there was a domino effect. The domino effect would have happened with or without the domino effect. Knock On Effect MeaningIn the second example, Iraq, there is no domino effect of knock-on effect-unexpected results-is happening. I don't really agree. The immediate goal of the action is met intentionally. As far as I can see, the terms domino effect and domino effect relate to both things that are affected second hand as a result of the effect on the target object. In addition to that knock-on effect refers to an episode, and domino effect to a series. Either can be predicted, and either can not be. Knock On Effect OriginHowever, it's interesting how, to the American-English speaker in this thread, the phrase domino theory seems so strongly associated with Vietnam. Perhaps that is why there is a slightly different perception of its meaning. The non-American posters in this thread have approached it from a different angle.
